Congrats to all the winners of Danforth's Science Fair last night!

Ms Tevlin put together another amazing Science Fair which decided the school's entries into the City Science on March 31st. Every year, MaST students are required to make a science fair project and we saw many great displays showing everything from Liquid Sunshine to How Fast Can A Gauss Rifle Fire. Upper year MaST students in Engineering raced their hand built rubber-band powered cars, while students from the Hospitality department cooked up great snacks for everyone. A good crowd of family, friends and alumni came out to enjoy the evening and it was a success thanks to many teachers from the Science and Technology departments.
